

The obsession site I want to create will be based on astrology and the astrological signs. I'm obsessed with astrology because of its complex history and various aesthetics. Astrology has also always been a topic that I've enjoyed talking with my friends about while asking if each other identifies with the traits of their astrological sign. Because each sign has a visual and personal aesthetic, I think a website could help organize and categorize them in a way that can easily help people explore and learn more about each astrological sign. Because I've been interested in astrology for a while, I have a good understanding of the astrological signs and will use this to decorate each sign's page with their own visual aesthetic.

To get the information assets for this website I will use websites such as <https://www.astrology.com/us/home.aspx> and https://www.astro.com/astro-databank/Main_Page

To get images and visuals I will use creative commons searching or create my own digital artwork.
